

The Human Body

Anatomy

What are **The Human Body** † made of and all about? It is the **anatomy** of the skeletal, digestive system, muscular, endocrine glands, nervous system, cardiovascular circulatory system, male reproduction, female reproduction, and the urinary system. **The Human Body** is made up of two thirds water. The rest is made up of about fifty billion tiny cells the basic Building block of life. Cells cannot be seen by the naked eye, but they can be examined under a microscope. They have a membrane around the outside and contain a nucleus, or control center. They vary in shape and size and carry out different jobs. For example, red blood cells carry oxygen, and the nerve cells pass messages to and from the brain. Cells have only a limited lifetime ‡ so they have to be repaired or replaced when they wear out. Groups of the same type of cell form body tissue such as the skin or muscle. Groups of different types of tissue make up the organs such as the **Brain** and the **Heart**. Each organ has a particular job to do in the body. To ponder **The Human Body is a marvel of natural science to recognize.**

The above is only the explanative somatic-physical **anatomy** part of our body. However, most of us have heard of the saying, **Body, Soul and Spirit** and with that said; Consider this analogy, an automobile without the instrument of a **Human Body** ¶ is just a stationary automobile without movement. We control that automobile and give it life to where we want to safely go. It is all done through thought and reasoning process. **In other words our body is only an instrument that houses our soul and spirit. I said it before and I'll say it again, who we are is how we think and it is how we choose to think in today's body that will ultimately be accountable for tomorrows meeting with God.**

Unlike cells, **God** doesn't need a microscope to examine anyone's **Heart** he just knows, so why not consider the meaning of the words to the messages in and of these compositional essays writings, especially, centered on **(The Human Heart)**. You will get it! Like the automobile we do not want to think recklessly risking an accident, because, we want to arrive to our destination safely. The consequences are too great to risk, so think safely.
